SUPERIOR GOALPOSTS

Technical Specification Datasheet

Manufactured By Superior Goalposts LLC

PRODUCT BRIEF

A Superior Goalpost is a highly-visible, non-conductive, telescopic hazard warning system installed to prevent collision with overhead obstructions and live electrical cables, manufactured in the U.S.A by Superior Goalposts LLC.

The system has been designed to reduce the risk of electrocution in work zones and to mitigate the risk of damage to sites. The system has been designed to reduce the risk of electrocution in work zones and mitigate the risk of damaging overhead infrastructure.

Safety Goalposts can be used to create gateways anywhere from 6ft to 80ft wide, and can be easily extended to heights of up to 23ft high.

KIT COMPONENTS

Our Telescopic Clamping System For Simple and Easy Set-Up. Just open the clamp lever, extend the pole and then close the clamp again fully to engage the lock.

Steel bases have 4 anchor points, one in each corner, giving users the option to fasten them to a solid surface such as timber mats, asphalt, or concrete –alternatively, sandbags or other ballast weights can be utilized to provide adequate stability to the system's base units.

We offer a 82ft length of hazard warning flagging, which will allow a much wider gateway to be created however these will not be as rigid as the solid bar fixing. 82ft allows for excess to tie down where required.

If you want a fixed rigid solution, which can be broken down into 6.5ft sections (6.5ft,13ft,19.5ft,26ft) then the Fixed Crossbar may be what you require.

TECHNICAL SPECIFICATION

Pole Specification

Conductivity: insulated to 75kv, made from multi layered fibreglass tubes and nylon based clamps.

Clamping: glass reinforced nylon clamps to hold tubes. Strong grip, easy control.

Collapsed length: 5.9 ft

Extended length: 23.95 ft

Tube sizes (OD): base pole 1.9685 in

Top section (OD): 1.26 in

Weight: 6.8 lbs.

Sections: five red and white UV tolerant.

Base Specification

Material: Power-Coated Steel Base:

Weight: 27.7lbs

Dimensions: 18 in x 18 in x 18 in

Top Sections

Flagging

Material: Plastic

Length: 82ft

Weight: 11lbs

Fixed Crossbar

Material: GRP

Length: 26ft

Weight: 11lbs
